

MCQUERRY ELEMENTARY CONSTRUCTION INFORMATION

Currently serves approximately 460 students in grades K-2, with 41 certified and 14 classified staff. The building is also used for the SOAR after school program and many

parks & rec activities. Originally built in 1955, with additional classrooms being added in 1969. In 1992, additions included classrooms, the front office, library, cafeteria expansion, and the gym. The gym, which is in good shape, will continue to be available for school & community use.

We've stretched every inch, patched every leak, and made the most of every corner. While our building has served us well for decades, it's showing its age. We continue to care for and maintain it with pride—it's time to consider a building that meets today's needs and tomorrow's goals.

Current Facility Challenges:

- Roof, flooring, HVAC systems, and playground require constant repairs
- Parking lots and driveways are in poor condition and need frequent maintenance
- Kitchen is small and overcrowded, limiting functionality
- Classrooms are undersized for current educational needs
- Hallways are narrow and become congested during passing times
- Bathrooms are outdated and in need of renovation
- Cafeteria is too small to accommodate all students comfortably
- Peak-hour traffic congestion remains an issue due to limited queuing space, despite improved bus loop/pickup separation.

Community Information Meetings:

- March 17, 2026, 7:00 pm at Mayview School
- March 31, 2026, 6:00 pm at McQuerry Elementary

POTENTIAL DESIGN CONCEPT FOR NEW BUILDING

Estimated construction cost ~ \$45,000,000

The project will require a no tax increase bond issue AND a Capital Levy tax increase.

A new building would be constructed next to the current OUE building.

Additional driveways into the property from Hwy OO will improve traffic flow.
